ABOUT ME

Passionate software engineer with hands-on experience in backend development and DevOps practices, using Spring Boot, MySQL, RESTful APIs, CI/CD, and Docker. Strong foundation in Java, data structures, algorithms, and core programming concepts. Motivated to grow through real-world projects, cloud technologies, and continuous learning.

PROBLEM SOLVING SKILL

- Leetcode:**Solved 100+ problems and continuing to improve**
- Contest: **Took part in both internal and external programming and robotics competitions.**

SKILLS

Programming Languages: Java,C++ | Backend Frameworks: Spring Boot | Frontend Frameworks: Angular
Web Development: HTML, CSS, Bootstrap,Thymeleaf | Database: MySQL | Cloud Services: AWS RDS , GitHub

EXPERIENCE

Java Developer *June 2025 – September 2025*
Parad8x (Remote / USA Client / contractual) LIVE

- Developed a shipping rate comparison backend using Spring Boot,Spring AI and MySQL on AWS RDS.
- Integrated multiple carrier APIs (FedEx, UPS, USPS) for real-time rate and delivery estimates.
- Implemented logic for carrier selection, cost calculation, and delivery date optimization.

| A course in "DevOps" |

Interactive Cares *September 2025 – Present*

- DevOps (in progress)

| A course in "Java Programming." |

Smartprogramming.in **Panjab, India**

- Gained proficiency in Core Java principles, covering essential programming concepts such as Object-Oriented Programming (OOP), exception handling, the collections framework, and multithreading.
- Additionally, Gained hands-on experience in Spring Boot, focusing on building RESTful APIs, implementing data persistence using Spring Data JPA with Hibernate, securing applications with Spring Security, and designing scalable microservices architectures.

EDUCATION

| **Jamalpur Science & Technology University** |

Subject: **Computer Science and Engineering** CGPA: 3.23 out of 4.00 **Graduated:** Month of July 2024

PROJECTS

Email-Reply-Assistant | |
This Chrome extension enhances Gmail by generating AI-based email replies with one click. It uses Google's Gemini API and a Spring Boot backend to help users draft quick, professional responses.
Technology: SpringBoot, Gemini AI, JavaScript

Result-Management-System | |
This web application is designed to manage and generate semester results for my CSE department. It allows students to easily view their results from a personal dashboard. The admin can manage student accounts and generate their results. Students can also fill out semester forms online and check their results by entering a valid roll ID.
Technology: Java, SpringBoot, HTML, Bootstrap, Thymeleaf,Mysql

AgroEye | |
This Smart Agriculture System uses AgroEye drones and is developed with Core Java and the Java Collections Framework.It simulates drone tasks like crop monitoring, issue detection, watering, spraying, and area coverage.
Technology: Core Java, Java Collections,OOP (Object-Oriented Programming)
